

Description of the Data

The data was collected by the Seattle Police Department, recorded by Traffic Records, and provided by Coursera via a download link. The time period for this data is from 2004 - 2020 and the dataset contains information on 194,673 car related accidents in the state of Seattle. There are also 36 different features including severity, location of the collision, collision type, date and time of the accident, the type of junction where the collision took place, weather conditions, road conditions, and light conditions.
